

To add or change the values of environment variables

1. Open System in Control Panel.
2. On the **Advanced** tab, click **Environment Variables**, then click the name of the user variable or system variable you want to change, as follows. Click:

- **New** to add a new variable name and value.
- **Edit** to change a current variable name and value.
- **Delete** to remove a variable name and value.

Note:

- If you are not logged on as administrator to the local computer, the only environment variables you can change are user variables.
- To open System, click **Start**, click **Control Panel**, click **Performance and Maintenance**, and then click **System**.
- Windows saves changes in the registry so they are available automatically the next time you start your computer.
- You might have to close and reopen running programs for the new settings to take effect.

Current Path on Win 8.1

C:\Program Files (x86)\NVIDIA Corporation\PhysX\Common;%SystemRoot%\system32;%SystemRoot%;%SystemRoot%\System32\Wbem;%SYSTEMROOT%\System32\WindowsPowerShell\v1.0

Updated path - added the bold red folders

C:\Program Files (x86)\NVIDIA Corporation\PhysX\Common;%SystemRoot%\system32;%SystemRoot%;%SystemRoot%\System32\Wbem;%SYSTEMROOT%\System32\WindowsPowerShell\v1.0;**C:\bat**;**C:\DOSUtil**;

NOTE: MUST add **;** (semicolon) to separate items
